

## WHAT'S IN THE KIT

4 components · Standard configuration · Patented electrode technology

### — CORE UNIT

## saahECG Diagnostic Device

A compact tabletop unit with a high-resolution touchscreen, WiFi connectivity, and a precision navigation dial. Captures up to 12,000 data points per second — 12× more than conventional ECG — and auto-generates a full diagnostic report in 12 seconds.

12,000 pts/sec sampling

12-second test

WiFi + data export

Built-in AI (ChatEPS-iDx™)

### — CONSUMABLE · PATENTED

## saahECG Patented Electrodes

The world's only US-patented ECG electrode — engineered to capture ion-level cardiac signals across 10 layers of heart muscle. Applied identically to standard 12-lead ECG placement. No special skin preparation required beyond supplied sandpaper.

US Patented

Ion-signal capture

Standard 12-lead placement

~₹750 / test

### — CONSUMABLE

## PhysioSign ECG Gel

A specially formulated conductive gel optimised for saahECG's ion-signal acquisition. Ensures low-impedance skin contact for maximum signal clarity. A small quantity per test maintains pristine conductivity without mess.

Ion-optimised formula

Low impedance

Hypoallergenic

### — CONSUMABLE

## Skin Prep Abrasive Strips

Micro-abrasive strips that gently remove the outermost skin layer at electrode sites, reducing skin-electrode impedance for cleaner, artifact-free signal acquisition — a critical step in achieving saahECG's ultra-high signal resolution.

Signal clarity prep

Single-use

Gentle micro-abrasion
